

# Enforce least privilege and control applications *with* Endpoint Privilege Management for Windows and Mac

Many organizations grant their users full local administrative rights, which provides the power to install unknown software, change system settings, execute commands, and much more. This means that malware can run with elevated privileges, security controls can be bypassed, and software can be installed and executed with no control or visibility, creating significant risk for the organization.

**BeyondTrust Endpoint Privilege Management for Windows and Mac enables organizations to remove local admin rights and enforce least privilege, fast—without sacrificing user productivity.**

The solution also implements lightweight application control seamlessly across Windows and macOS desktops and servers, which includes advanced protection against malware, ransomware, fileless threats, and identity-based attacks.

“BeyondTrust provides a powerful platform that allows us to streamline and standardize application control and privileged management across our entire organization, that protects Ramboll’s IT assets and empowers users to make informed decisions about the apps they use.”

- DAN BARTLETT, SENIOR CONSULTANT, RAMBOLL

## Feature Highlights

### True Least Privilege

Give just enough access, for just the finite moments it is needed, to only the appropriate application or process.

### Granular Application Control

Gain control over what applications users can install or run — without impacting productivity or creating management overhead.

### Reporting & Visibility

Monitor user activity through customizable dashboards and reports; seamlessly update policy based on user activity to continuously bolster your security posture.

### Flexible End-User Experience

Craft a tailored end-user experience for smooth adoption, reducing confusion with features like seamless elevation, ServiceNow and MFA integration, and custom branding.

### Rapid Deployment & Streamlined Management

Deliver fast time-to-value, alleviate the IT service desk workload, and minimize business disruption with prebuilt QuickStart policy templates and robust support.

### Zero Trust Security Across Windows & macOS

Remove local admin rights and enforce true least privilege seamlessly across Windows and macOS desktops and servers.

### Audit & Compliance Assurance

Address compliance and cyber insurance requirements quickly with a single, unimpeachable audit trail of all privileged actions.
